

# Platform-based Programming

#1 Java Types

1) Array

2) enum

**2018년 1학기**

# Problem

- ❖ Write a Java program based on the given numbers
- ❖ The program should look like this!

```
ADD 10
ADD 20
LIST
10 20
SUM
30
ADD 30
SUM
60
LIST
10 20 30
QUIT
```

# Code Skeleton

❖ File name: ArrayEnum.java

```
public class ArrayEnum {  
    public static void main(String[] args) {  
        // should enum for ADD, LIST, SUM  
        // should invoke printList(), getSum() ;  
    }  
    private static void printList(int[] values) {  
        // add your code here!  
    }  
    private static int getSum(int[] values) {  
        // add your code here!  
    }  
}
```
